REPORT HOLDER:
FIRE RETARDANT CHEMICALS TECHNOLOGIES, LLC

EVALUATION SUBJECT:
FLAMETECH™ FIRE-RETARDANT-TREATED WOOD

ADDITIONAL LISTEES:
CHICAGO FLAMPROOF & WOOD SPECIALTIES CORPORATION dba NORTH TEXAS FLAMPROOF
CHICAGO FLAMPROOF & WOOD SPECIALITES CORPORATION

1.0 EVALUATION SCOPE
Compliance with the following codes:

Properties evaluated:
- Flame spread
- Structural
- Corrosion
- Hygroscopicity
- Fire-resistance-rated Wall Assemblies

2.0 USES
FlameTech™ fire-retardant-treated wood is used in areas that are not exposed to the weather or wetting, but may be exposed to dampness where the code permits the use of wood or fire-retardant-treated wood.

3.0 DESCRIPTION
3.1 General:
FlameTech™ fire-retardant-treated wood is lumber and plywood impregnated with FlameTech™ fire-retardant chemicals by a pressure process.

FlameTech™ treatment of lumber of the following species is recognized as being fire retardant:
- Southern Pine
- Douglas Fir
- Spruce-Pine-Fir

FlameTech™ treatment of plywood fabricated with face and back veneers of the following species is recognized as being fire retardant:
- Douglas Fir
- Southern Pine

3.2 Flame Spread:
FlameTech™ fire-treated wood has a flame-spread index of 25 or less when subjected to ASTM E84 tests and shows no evidence of significant progressive combustion when the tests are continued for an additional 20-minute period.

3.3 Structural Strength and Durability:
The effects of FlameTech™ fire-retardant treatment on the strength of the treated lumber and plywood must be accounted for in the design of the wood members and their connections. Load duration factors greater than 1.6 are not permitted to be used in the design.

The strength properties of lumber when treated with FlameTech™ fire-retardant chemicals and used in applications at temperatures up to 100°F (38°C), are subject to the design factors shown in Table 1 of this report.

The strength properties of lumber when treated with FlameTech™ fire-retardant chemicals and used in applications at temperatures up to 150°F (66°C), are subject to the span limitations shown in Table 2 of this report.

The strength properties of plywood, when treated with FlameTech™ fire-retardant chemicals and used in applications at temperatures up to 170°F (77°C), are subject to the span limitations shown in Table 3 of this report.

3.4 Corrosion:
The corrosion rate of aluminum, carbon steel, galvanized steel, stainless steel, copper or red brass in contact with wood is not increased by FlameTech™ fire-retardant treatment when the product is used as recommended by the manufacturer.

3.5 Hygroscopicity:
FlameTech™ treated wood qualifies as an Interior Type A (HT) fire-retardant wood in accordance with the American Wood Protection Association (AWPA) Standard U1, Commodity Specification H, Use Category UCFA.

4.0 DESIGN AND INSTALLATION
4.1 General:
Structural systems that include FlameTech™ fire-retardant-treated lumber or plywood must be designed and installed
in accordance with the applicable code using the appropriate lumber design value adjustment factors and plywood spans from Tables 1 and 2 of this report. Ventilation must be provided in accordance with the applicable codes.

The design value adjustment factors and plywood load and spans in Tables 1 and 2 of this report are applicable under elevated temperatures resulting from cyclic climatic conditions. They are not applicable under continuous elevated temperatures resulting from manufacturing or other processes that require special consideration in design.

The treated lumber and plywood must only be used in areas (including attic spaces) where the lumber is exposed to temperatures of 150°F (66°C) or less and the plywood is exposed to temperatures of 170°F (76.5°C) or less.

Exposure to precipitation during storage or installation must be avoided. If material does become wet, it must be replaced or permitted to dry (maximum 19 percent moisture content for lumber and 15 percent moisture content for plywood) prior to covering or enclosure by wallboard or other construction materials (except for protection during construction).

4.2 Fasteners:
Fasteners used in FlameTech™ fire-retardant-treated wood must be galvanized steel, stainless steel, silicon bronze or copper, in accordance with Section 2304.10.5 of the 2018 and 2015 IBC, Section 2304.9.5 of the 2012, 2009 and 2006 IBC, Section 317.3 of the 2018, 2015, 2012 and 2009 IRC, and Section R319.3 of the 2006 IRC, and must be subject to the design value adjustments indicated in Table 1 of this report.

4.3 Use as a Component of Fire-resistance-rated Wall Assemblies:
4.3.1 One-hour Exterior Wall Assembly: In Type III, Type IV and Type V construction, the exterior wall assemblies must be constructed of FlameTech™ treated wood studs and plywood. The design values for the studs must be adjusted in accordance with Tables 1 and 2. The allowable spans for the plywood sheathing must be in accordance with the spans given in Table 3 for FlameTech™ Wall/Subfloor.

When the fire-resistance rating is required from only the interior side, the wall must be constructed in accordance with Figure 2.

When the fire-resistance rating is required from the interior side and exterior side, the wall must be constructed in accordance with Figure 3.

4.3.2 Two-hour Exterior Wall Assembly: In Type III, Type IV and Type V construction, the exterior wall assemblies must be constructed of FlameTech™ treated wood studs and plywood. The design values for the studs must be adjusted in accordance with Table 1. The allowable spans for the plywood sheathing must be in accordance with the spans given in Table 3 for FlameTech™ Wall/Subfloor.

When the fire-resistance rating is required from only the interior side, the wall must be constructed in accordance with Figure 4.

When the fire-resistance rating is required from the interior side (Two-hour) and exterior side (One-hour), the wall must be constructed in accordance with Figure 5.

4.4 Plywood Diaphragms and Shear Walls:
Wood-frame diaphragms and shear walls must be constructed in accordance with Section 2306.2 and 2306.3 of the IBC (2306.3 and 2306.4 of the 2009 and 2006 IBC).

When FlameTech™ fire-retardant-treated plywood is used in a diaphragm or shear walls, the thickness must be 1/16-inch thicker than that determined for the tabulated allowable values contained in Sections 4.2 or 4.3 of ANSI/AWC Special Design Provisions for Wind and Seismic (SDPW) or as shown in the tables referenced in Section 2306.2 or 2306.3 of the IBC (2306.3 or 2306.4 of the 2009 and 2006 IBC). Thickness to be used for FRT plywood compared to untreated plywood in diaphragm and shear walls are shown below:

5.0 CONDITIONS OF USE

The FlameTech™ fire-retardant-treated wood described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Strength calculations must be subject to the design factors or span ratings shown in Tables 1 and 2 of this report.

5.2 The design value adjustment factors and span ratings given in this report must only be used for unincised dimension lumber and plywood of the species noted in this report.

5.3 FlameTech™ treated wood must not be installed where it will be exposed to precipitation, direct wetting or regular condensation.

5.4 FlameTech™ treated wood must not be used in contact with the ground.

5.5 FlameTech™ lumber must not be ripped or milled as this will alter the surface-burning characteristics and invalidate the flame spread classification. Framing, end cuts, holes, joints such as tongue and groove, bevel scarf and lap may be used.

5.6 Treatment is at the facilities of the listees noted in this report under a quality control program with inspections by ICC-ES.

6.0 EVIDENCE SUBMITTED

Data in accordance with the ICC-ES Acceptance Criteria for Fire-retardant-treated Wood (AC66), dated June 2015, editorially revised April 2018.

7.0 IDENTIFICATION

7.1 Lumber and plywood treated with FlameTech™ fire-retardant chemicals must be identified by the structural grade mark of an approved agency. In addition, all treated lumber and plywood must be stamped with the name of the inspection agency [Timber Products Inspection, Inc. (AA-696)]; the Fire Retardant Chemical Technologies, LLC or listee, name and location; the production plant identification; labeling information in accordance with Section 2303.2.4 of the 2018, 2015, 2012 and 2009 IBC and Section 2303.2.1 of the 2006 IBC or Section...

SI Unit Conversions: 1 in = 25.4 mm  1 psf = 48 N/m²

1. All loads are based on two-span condition with strength axis perpendicular to supports.
2. Panel edge supports shall be required for roof sheathing. Panel edge clips when used shall be installed as follows: One midway between supports for 24-inch and 32-inch spans, two at 1/3 points between supports for 48-inch spans. Clips must be manufactured for the plywood thickness.
3. Fastener size and spacing shall be as required in accordance with the IBC or IRC for untreated plywood of the same thickness.
4. For low-sloped or flat roofs with membrane or built-up roofing having a perm rating of less than 0.2; use rigid insulation having a minimum R-value of 4.0 between the sheathing and the roofing, or use the next thicker panel than the tabulated for the span and load (example; 19/32 for 24; 23/32 for 48); and use a continuous ceiling air barrier and vapor retarder with a perm rating of less than 0.2 on the bottom of the roof framing above the ceiling.
5. FlameTech™ fire-retardant-treated plywood must not be used as roof sheathing if a radiant shield is used beneath the roof sheathing.
6. The total allowable load is the sum of the live load and dead loads at maximum span. For allowable live loads, subtract dead (assumed to be 8 psf) from the total loads listed.
7. The 15/32 and ½-inch plywood is limited to 4-ply. 19/32 and 5/8-inch plywood is limited to performance rated 4-ply and 5-ply. 23/32 and 3/4-inch plywood is limited to performance rated 5-ply and 7-ply.
8. Uniform load deflection limitations 1/180 of span under live load plus dead load and 1/240 under live load only.
9. Subfloor is limited to 100 psf Maximum Load.
10. Climate Zone definitions:
    - Zone 1 – Minimum design roof live load or maximum ground snow load ≤ 20 psf (960 Pa)
    - Zone 1A – Southwest Arizona, Southeast Nevada (Area bounded by Las Vegas-Yuma-Phoenix-Tucson)
    - Zone 1B – All other qualifying areas of the United States
    - Zone 2 – Maximum ground snow load > 20 psf (960 Pa)
11. For other load conditions, contact manufacturer.
FIGURE 1—LUMBER AND PLYWOOD STAMPS

FlameTech™ SAMPLE LABELS
Fire Retardant Wood FlameTech™ Lumber and Plywood

ASTM E119 Rating: 1 Hour Load Bearing (2015 NDS – F 0.96 for FRWT)

Rated from One Side (Interior Side Only)

1. GYPSUM BOARD (Interior): One layer Type X, complying with ASTM C1396, min. 5/8 in. thick, 4 ft. wide applied vertically, fastened to framing. Joints covered with paper tape and joint compound. Fasteners covered with joint compound. Min. #6 x 1-5/8 in. long Type S or W screws, spaced max. 6 in. on center (oc).

2. CERTIFIED MANUFACTURER: Fire Retardant Chemical Technologies LLC.

CERTIFIED PRODUCT: FlameTech™

2A. CERTIFIED MODEL: FlameTech Lumber

FlameTech Lumber is min. 2x4 in. nominal wood studs spaced 16 in. oc, or 2x6 in. nominal wood studs spaced 24 in. oc, double top plates and single bottom plate fastened together with 16d common nails (3-1/2 in. x 0.162 in.), 16d box nails (3-1/2 in. x 0.135 in.), or 12d ring nails (3-1/4 in. x 0.135 in.).

2B. CERTIFIED MODEL (Exterior): FlameTech Plywood

FlameTech Plywood, min. 15/32 in. thick, is applied vertically over the specified framing with min. 2-3/8 in. long, 0.113 in. diameter nails, spaced max. 8 in. oc around the perimeter and max. 12 in. oc in the field. Horizontal joints must be blocked.

3. INSULATION: Fiberglass Class A batt insulation, min. 3-3/4 in. thick, R-13 friction fit between the studs. If 2x6 in. nominal wood studs are used, fiberglass batt insulation shall be min. 5-1/2 in. thick.

4. EXTERIOR FACINGS (Optional): Materials installed in accordance with manufacturer’s installation instructions:
   - Masonry brick veneer or concrete
   - Portland cement or synthetic stucco systems with self-furring metal lath or adhesive base coat
   - Hardboard, wood structural panel, plywood, or fiber-cement siding
   - Metal siding
   - Vinyl siding – exterior plastic

DIVISION: 06 00 00—WOOD, PLASTICS AND COMPOSITES
Section: 06 05 73.13—Fire-Retardant Wood Treatment

REPORT HOLDER:
FIRE RETARDANT CHEMICALS TECHNOLOGIES, LLC

EVALUATION SUBJECT:
FLAMETECH™ FIRE-RETARDANT-TREATED WOOD

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that FlameTech™ fire-retardant-treated wood, recognized in ICC-ES master evaluation report ESR-4056, has also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2016 California Building Code (CBC)
- 2016 California Residential Code (CRC)

2.0 CONCLUSIONS

2.1 CBC:
The FlameTech™ fire-retardant-treated wood, described in Sections 2.0 through 7.0 of the master evaluation report ESR-4056, complies with CBC, provided the design and installation are in accordance with the 2015 International Building Code® (IBC) provisions noted in the master report.

The products recognized in the master report ESR-4056 have not been evaluated under 2016 CBC Chapter 7A, for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within a State Responsibility Area or any Wildland–Urban Interface Fire Area.

2.2 CRC:
The FlameTech™ fire-retardant-treated wood, described in Sections 2.0 through 7.0 of the master evaluation report ESR-4056, complies with the CRC, provided the design and installation are in accordance with the 2015 International Residential Code® (IRC) provisions noted in the master report.

The products recognized in the master report ESR-4056 have not been evaluated under 2016 CRC Section R337, for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within a State Responsibility Area or any Wildland–Urban Interface Fire Area.

The products recognized in this supplement have not been evaluated for compliance with the International Wildland–Urban Interface Code®.

This supplement expires concurrently with the master report, issued March 2019.
DIVISION: 06 00 00—WOOD, PLASTICS AND COMPOSITES

REPORT HOLDER:
FIRE RETARDANT CHEMICALS TECHNOLOGIES, LLC

EVALUATION SUBJECT:
FLAMETECH™ FIRE-RETARDANT-TREATED WOOD

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that FlameTech™ fire-retardant-treated wood, recognized in ICC-ES master evaluation report ESR-4056, has also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2017 Florida Building Code—Building
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS

The FlameTech™ fire-retardant-treated wood, described in Sections 2.0 through 7.0 of the master evaluation report ESR-4056, complies with the Florida Building Code—Building and Florida Building Code—Residential, provided the design and installation are in accordance with the International Building Code® provisions noted in the master report.

Use of the FlameTech™ fire-retardant-treated wood has also been found to be in compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and the Florida Building Code—Residential.

For products falling under Florida Rule 9N-3, verification that the report holder’s quality assurance program is audited by a quality assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the master report, issued March 2019.
