Since 1991, Flameproof Companies has been committed to providing superior products and excellent service to our customers. We believe our adherence to these fundamental principles allows us to provide a great experience to our customers and build lasting relationships.

Flameproof Companies is a manufacturer and distributor of treated lumber and specialty building products for the commercial, industrial and multi-family building industries. We specialize in building code compliant, environmentally friendly fire retardant and preservative treated wood products, along with related construction materials.

We have facilities strategically located in Chicago, Illinois; Milwaukee, Wisconsin; Fort Worth, Texas and Lake Oswego, Oregon to best serve these regions. A new production facility is planned for eastern Pennsylvania in 2019.

We embrace innovation in products and production processing, allowing us to bring to our customers the very best our industry has to offer.

We look forward to servicing you today and building a relationship for tomorrow, and beyond.
Class A Rated
Fire Retardant Treated Wood Products

Certified and Listed with Accredited Testing Agencies
Flame Tech™ fire retardant lumber and plywood products have been tested, certified and listed with QAI Laboratories (Listing B-1093-1), Intertek Laboratories (Listing 720035) and Underwriters Laboratories (Listing BUGV.r39579 & BPVV.r39580), all of which are prominent, internationally accredited testing agencies.

Ongoing Independent Third Party Inspections
Timber Product Inspection (TPI) provides ongoing random follow-up inspections to assure compliance with AWPA standards for fire retardant treatment and the required quality control metrics for fire retardant chemical, physical treating parameters and kiln drying. This monitoring program is in addition to the QAI, UL and Intertek follow-up requirements for listing.

Building Code Compliant
All Flame Tech™ fire retardant lumber and plywood meets the requirements for FRTW listed in ICC AC66 and as such are compliant with major building codes. Flame Tech™ treated wood products are compliant with 2018, 2015, 2012 and 2009 International Building Code® (IBC).

Always check with applicable building codes to determine what specific criteria are required for any given locality or job.

American Wood Protection Association (AWPA) Compliance
Flame Tech™ Fire Retardant wood products comply with AWPA UC-1 and UCFA use category system. Flame Tech™ treatment process meets the AWPA T1 standard and Flame Tech™ chemical has been analyzed by Timber Products Inspection (TPI) to determine that the chemical components meet AWPA P-50 protocol.

* Flame Tech™ products normally contain a red tint, but are also available in clear, without the tint.
Applications for Use

Fire Blocking
Plywood Roof Sheathing
Wall Framing
Wall Sheathing
Store Fixtures
Underlayment
Subfloors
Mezzanine Floors

Flat Roof Blocking
Lumber Roof Decking
Interior Roof Trusses
Interior Floor Trusses
Interior Millwork
Interior Scaffold Plank
Interior Wall Blocking

Testing and Approvals

ASTM International (ASTM):

ASTM D6305 – Standard Practice for Calculating Bending Strength Design Adjustment Factors for Fire Retardant Treated Plywood Roof Sheathing
ASTM D6841 – Standard Practice for Calculating Treatment Adjustment Factors for Fire Retardant Treated Lumber
ASTM 2768 – Extended Duration Surface Burning Characteristics of Building Materials
ASTM E119 – Fire Tests of Building Construction and Materials

American Wood-Protection Association (AWPA):

AWPA E12 – Standard Method of Determining the Corrosion of Metal in contact with wood
AWPA P50 – Standard for Fire Retardant FR-2 (FR-2)
AWPA T1 – Use Category System: Processing and Treatment Standard
AWPA U1 – Use Category System: User Specifications for Treated Wood

Certification Agencies

Intertek – ASTM E84/ASTM E2768 – Intertek SpecDirect ID – 37150
Intertek – ASTM E119 – FRCT/FRWT 120-1, FRCT/FRWT 120-2, FRCT/FRWT 60-1, FRCT/FRWT 80-2, FRCT/FRWT 80-3, and FRCT/FRWT 80-4
QAI – ASTM E84/ASTM E2768 – B1093-1
UL – 723 – Lumber BUGV.r39579 and Plywood BPVV.r39580

Code Compliance Research Reports

CCRR-1088 (Intertek) – FlameTech™ Fire Retardant Treated Wood
LARR 26119 (Los Angeles Research Report) – FlameTech™ Fire-Retardant-Treated Wood
ICCESR Report ESR – 4056

(1) Load and span ratings developed in accordance with ASTM D5516 and calculated in accordance with ASTM D6305.

(2) All loads are based on two-span condition with strength axis perpendicular to supports.

(3) Panel edge support shall be required for roof sheathing. Panel edge clips when used shall be installed as follows: one midway between supports for 24-inch and 32-inch spans, two at 1/3-points between supports for 48-inch span. Clips must be manufactured for the plywood thickness used.

(4) Fastener size and spacing shall be as required in the applicable building code for untreated plywood of the same thickness.

(5) For low-sloped or flat roofs with membrane or built-up roofing having a perm rating of less than 0.2: use thicker panel than the tabulated for the span and load. (i.e. 19/32" for 24"; 23/32" for 32"; and use a rigid insulation having a minimum R-value of 4.0 between the sheathing and the roofing, or use the next continuous ceiling air barrier and vapor retarder with a perm rating less than 0.2 on the bottom of the roof framing above the ceiling finish.

(6) FlameTech treated plywood must not be used as roof sheathing if a radiant shield is used beneath the roof sheathing.

(7) The total allowable load is the sum of the live and dead loads at maximum span.

(8) 15/32” and 3/8” plywood limited to 4-ply. 19/32” and 5/8” plywood is limited to 4-ply and 5-ply. 23/32” and 7/8” plywood is limited to 5-ply and 7-ply.

(9) Uniform load deflection limitations 1/180 of span under live load plus dead load, 1/240 under live load only.

(10) Subfloor is limited to 100 psf. maximum live load.

(11) Climate Zone Definition:
   a. Zone 1: Minimum design load or maximum ground snow load up to 20 psf.
   b. Zone 1A: South West Arizona, South East Nevada (area bounded by Las Vegas-Yuma-Phoenix-Tucson).
   c. Zone 1B: All other qualifying areas of the Continental United States.
   d. Zone 2: Minimum ground snow load over 20psf.

Micro Pro Treated Wood Advantages

- First Wood Treatment Process to Complete Life-Cycle Assessment Studies - The MicroPro® wood treatment process systems were analyzed by Scientific Certification Systems under an exhaustive environmental review process called Life-Cycle Assessment (LCA), in accordance with rigorous international standards set by ISO, the leading international standards setting organization. The MicroPro LCA studies are in compliance with ISO standards 14044 and 14025.
- Home Innovation NGBS Green Certified - The MicroPro technology has been approved for points toward National Green Building Certification to the National Green Building Standard. Wood products treated with MicroPro technology are now eligible for more green building points than any other treated wood product in the market.
- UL GREENGUARD GOLD Certification - The MicroPro preservative has undergone rigorous testing and met stringent standards for low volatile organic compound (VOC) emissions. Products certified to this criteria are suitable for use in schools, offices, and other sensitive environments.
- Lighter, more natural wood appearance.
- Improved painting and staining qualities.
- Better corrosion resistance for code-approved fasteners and hardware.
- Carbon steel fasteners may be used for interior, above ground, weather protected applications such as sill plates, interior framing and interior trusses.
- Approved for aluminum contact.
- End uses include interior and exterior above ground, ground contact, and fresh water immersion.
- Treated wood warranty programs. (See warranty for details.)
- Building code compliant. ICC-ES Reports, ESR-2240.

End Use Classifications for MicroPro Pressure Treated Wood Products

General Use - Above Ground (such as decking and sills)
Ground Contact and Fresh Water Contact (such as decks, fence posts, joists, beams, and docks)
Ground Contact - Critical Structural Members (such as building poles, permanent wood foundations)

Building Code Compliance
MicroPro/LifeWood products, as described in the ICC Evaluation Services, Inc. ESR-2240, meet all major building code requirements.
Flameproof Companies offers options for exterior applications that call for fire retardant wood products.

FX Lumber Guard XT can be used when higher than normal humidity or moisture conditions exist within a building and minimal leaching of the fire retardant chemical from the wood is desired. The resinous base of FX Lumber Guard XT provides such properties.

In conditions where wood will be exposed permanently outdoors, and fire resistance is desired, FX Lumber Guard XT applied over kiln dried preservative treated lumber is recommended to prevent rot from occurring.

These products are not intended for use in 1-2 hour code compliant roof, wall or floor assemblies.

FX Lumber Guard XT, Technical Data Submittal Sheet

- Certified Listed to ASTM E84 & ASTM E2768
- Class A Rated
- SYP, SPF, Hem Fir & Doug Fir Lumber, SYP and Fir Plywood
- CSI Div. 06 05 73.13 Fire Retardant Wood Treatment & CSI Div. 09 96 43 Fire Retardant Coatings

Intertek: Warnock Hersey Certification is equivalent to “UL Certification”

Additional Testing and Standards:
- ASTM D2898
- CAN/ULC S102
- NFPA 255/703
- ANSI/UL 723
- UBC 42.1
  - For Engineered Materials, Cedar, Redwood, Bamboo and reclaimed woods.
- ICC-ESR 3872

Technical Data, Exterior or Interior Application

- FSI < 25
- SGI / SDI < 200
- Natural Mold and Insect Inhibitor
- 1-Coat Application
- Non Toxic
- Non Halogenated
- No PBDEs
- No Carcinogens
- Storage Temp > 45°F
- Environment Safe
- Shelf Life: 3yrs
- Stainable/Paintable
- Application Temp 45-95°F
- pH Range: 4.5-5%
The “GREEN” movement is firmly establishing itself with owners who are demanding environmentally responsible design and construction.

There are many standards to be met in earning FSC/LEED points. Flameproof Companies can assist you in maximizing your credits. We are uniquely qualified to fire retard or preservative treat FSC credited lumber and plywood. This eliminates wasted time, as well as multiple cost mark-ups, allowing us to offer better service at more competitive pricing.

---

FSC/LEED®
Forest Stewardship Council
Flameproof Companies - Certified Distributor and Treater

The “GREEN” movement is firmly establishing itself with owners who are demanding environmentally responsible design and construction.

There are many standards to be met in earning FSC/LEED points. Flameproof Companies can assist you in maximizing your credits. We are uniquely qualified to fire retard or preservative treat FSC credited lumber and plywood. This eliminates wasted time, as well as multiple cost mark-ups, allowing us to offer better service at more competitive pricing.
CHICAGO FLAMEPROOF FSC®/LEEDS CONTRACTOR MATERIAL SUBMITTAL

Certified Chain of Custody Supplier, material purchased from Chicago Flameproof (FSC Public Search: info.fsc.org/) Will qualify for the following LEED credits:
EQ4.4 Urea Formaldehyde free and low emitting formaldehyde products on sheeting grade plywood. See SDS for treated wood.
MR5.1 and MR5.2 Finished product manufactured within 500 miles of the project site qualifies.

Wood Products identified “FSC® Mix Credit” are valued at 100% of their cost.

Recycled Content:
0% Post-Consumer on lumber and plywood
0% Pre-Consumer on lumber and plywood

Rapidly Renewable Content:
0% For lumber and plywood

VOC Content:
Panels meeting the most stringent formaldehyde requirements are required, using testing method JIS A 1460, to have average emission levels below 0.30 mg/l.

100% of material is Harvested/Extracted outside the 500 mile radius. Our MCA treated and Fire retardant items are manufactured in Montgomery, IL 60538.

Location of Harvest/Extraction:
- RoyOMartin, Chopin, LA RA-COC-000695 & RA-CW-000695
- Roseburg Forest Products, Dillard OR SCS-COC-000300
- Martco Limited Partnership, Chopin LA SW-COC-000696
- Collins Softwoods, Portland, OR SCS-COC-000023
- Biever Lumber, St Clair, MI SCS-COC-002709

The cost of all wood products, both FSC® certified and not, must be tallied on the appropriate LEED document (e.g., MRc7 template). Wood products that are not FSC® certified and those that are identified on invoices as “FSC® Mix Credit” should be valued at 100% of the product cost. Wood products identified as “FSC® Mix [NN]%” should be valued at the indicated percentage of their cost, e.g., a product identified as “FSC® Mix75%,” should be valued at 75% of the cost. (Wood products identified as “FSC® Recycled” or “FSC® Recycled Credit” do not count toward certified wood credits. They qualify instead as recycled content products.)

LVL - Laminated Veneer Lumber

LVL offers a stronger, stiffer and more consistent alternative to traditional solid-sawn lumber. Flameproof Companies stocks a full line of LVL with depths ranging from 5-1/2” to 24”, widths from 1-3/4” to 5-1/2”. LVL are available in even length increments.

I-Joist

Flameproof stocks a full line of LVL flange and solid sawn I-joist to fit any need. Our I-joist series are versatile, consistent and cost effective.

Glulam

We supply a full line of untreated, preservative treated and fire retardant treated Doug Fir and Southern Yellow Pine Glulam beams to fit your every long-span need.

Contact Flameproof Companies regarding fire retardant treatment on engineered lumber products.
Mag Tech™ OSB Structural Fire-Rated Sheathing is a patent-pending, code compliant, Class A Flame Spread Rated, fire retardant wood panel system that is both durable and easy to handle on the job site. Mag Tech™ structural sheathing can be used in fire-rated wall applications, as well as for fire retardant structural sheathing on exterior and interior walls, pitched roofs, flat roof decks, and floors. Mag Tech™ offers superior performance with both increased fire resistance and improved structural capacity in a single panel.

Mag Tech™ consists of a 3 mil thick, non-combustible, fiber-reinforced magnesium oxide (MgO) board laminated to untreated oriented strand board (OSB) on one or two faces, as required by code and building application. The non-combustible MgO board lamination process assures a composite uniform section to reinforce the OSB while also providing both flame and thermal resistance.

Mag Tech™ offers increased structural capacity. In contrast to other fire retardant sheathing products that are chemically-impregnated or coated, Mag Tech™ is created using a proprietary lamination process that bonds reinforced MgO board to the face of OSB structural sheathing. The noncombustible MgO laminate prevents both flame and smoke penetration through the sheathing, as well as enables the OSB to remain free of fire retardant chemicals for greater strength of the overall composite sheathing system.

Mag Tech™ is free of hazardous chemicals, with no VOC (off-gas) present during fabrication. The MgO panel face provides an attractive tile-like surface that mitigates the spread of flame and heat with a burn-through resistance that is greater than that of standard wood structural panels that are treated with fire retardant chemicals.

Refer to the Mag Tech™ Fire Retardant OSB Sheathing Products Specifications and Technical Information Brochure for further information.

**Product Specifications**

- **Size/Length**: Mag Tech™ is available in a variety of sizes, thicknesses, and grades and can be fabricated as needed per specific project specifications.
- **All materials are rated as non-hazardous materials.**
- **Code Compliance and Fire Performance:**
  - Class A Flame Spread Rating (ASTM E-94 / ASTM E2768 / UL 273 / UBC 8-1) per QA1 Laboratories, Inc. Test Report TJ2773
    - Flame Spread Index: 0
    - Smoke Index: 0 - 5
  - Load Bearing 1-Hour and 2-Hour Fire-Rated Exterior Bearing Walls for Type III & Type V Construction (ASTM E119 / UL263) per Intertek Design No. CF/WPPS 120-01 / 120-02 / 120-03 / 60-01 / 60-02
  - IBC 706 – Fire Walls, Vertical Continuity and general materials used for makeup of fire walls are in compliance with IBC.
  - Load Tested and analyzed through engineering by Structural Enginuity, Inc. using load test in compliance with ASTM E72-80 “Standard Methods of Conducting Strength Tests of Panels for Building Construction.”

CERTAIN FLAMEPROOF COMPANY LOCATIONS STOCK, SUPPLY AND LOAD A WIDE VARIETY OF LIGHT GAUGE METAL FRAMING PRODUCTS, GYPSUM BOARD AND INSULATIONS OF VARIOUS TYPES AND BRANDS.

FLAMEPROOF COMPANIES SUPPLIES THESE PRODUCTS LOCALLY IN THE CHICAGOLAND MARKET, BUT ALSO TO PROJECTS IN DIFFERENT AND MORE REMOTE LOCATIONS ACROSS THE US. WHILE NOT A TRADITIONAL DRYWALL DISTRIBUTOR, FLAMEPROOF COMPANIES HAVE EXTENSIVE EXPERIENCE IN THESE PRODUCT CATEGORIES AND WE WELCOME THE OPPORTUNITY TO BE OF SERVICE TO YOUR COMPANY WITH THESE PRODUCTS.
For decades you’ve relied on our crane, boom and mobile forklift services. Now you can call on us to stock materials on your jobs as well.

Count on us for superior service, at very competitive prices, as always.

Arrange your stocking needs with your salesperson, by calling the office or contact us via email.

- Boom Reach - 58’
- Crane Reach - 48’
